Nilpotent and solvable radicals in locally finite ...

Nilpotent and solvable radicals in locally finite congruence modular varieties RALPH MCKENZIE^{*} Abstract. The Loewy rank of a modular lattice L finite height is defined as the least n for which there exist $0 < a < 9 \cdot 9 < a = 1$ in L such that each interval $ll(a, a, \sim \sim]$ is a complemented lattice. In this paper, a generalized notion of Loewy rank is applied to obtain new results in the **CA2586349A1 - Flooring system having multiple alignment ...**

Laminated flooring planks include decorative motifs, mechanically embossed-in--registration surface textures, recessed perimeters, and locking mechanisms. By arranging portions of the decorative motifs along edges of a flooring plank, a periodic flooring pattern larger than an individual plank can be formed by placing identical planks adjacent
